Kung

584 Boys are always considerably older than girls before their parents betroth them.
[805] We never knew the precise age of a /Kung because they reckon time from one season to the next, not in years, and do not keep track of a person's age by any measurement. Boys appear to be usually around twelve to fourteen or fifteen before they are
[868] betrothed. At this age their fathers begin to take them on the long hard hunts for the
[883] big animals which supply the people's meat and begin their serious hunting training.

As to girls, wives are in such demand in this polygynous society that the parents of boys have their eyes upon every girl baby and may say to the parents of an unborn infant, 'If it is a girl, let us have her for our son.' It seems to be more usual, however, to betroth the girls when they are about two to five or six. The boys wait patiently for long years for their fiancées to grow up.

We wondered what would happen if, when the time at last came for the marriage, the boy or girl should refuse the parents' choice. It appears that they seldom do. A boy is usually too eager to get a wife. To refuse the betrothed might mean he would have to wait for years and years again for a girl baby to grow up. The girls are usually too young to protest but it sometimes happens that one does. /Kung
593 parents are exceedingly protective and permissive with their children, and delight
● 855 in them, especially in their infancy. I have sometimes seen an older child scolded or
861 snapped at by an impatient mother but I never saw a child severely punished. No hard work and few, if any, regular chores are demanded of dependent children. The same protectiveness and permissiveness were apparent in parents' lenience with respect to their girls' betrothals. They complied with the girls' wishes.

The marriage may take place when the parents agree. The age of the young people
582 varies greatly. For the girl, there are no definite age or other requirements. The girl need not, for instance, show physical signs of maturity. When the important Ceremony of First Menstruation is performed, the girl may have been married for years. Bau, who was married to Tsamgao in 1951, did not have her first child for six years. /Nai was married to /Gunda in May 1953. She menstruated for the first time in March 1959. To be married as young as that is not at all unusual, but we have known several girls to be somewhat older.

The parents explain that when the girls marry young they 'get used to' their
582 husbands. I am sure there is a great deal in this and I am sure it strongly affects the
593 relations of husbands and wives, but I had insufficient opportunity to observe eight- or nine-year-old brides with teen-age husbands, and insufficient means, through interpreters, to grasp the nature of their relationship. What is the young husband like to a girl child? The friendly, gentle old man, Demi, said to me, 'They enjoy their youth together.'

593 The young couples are expected not to have sexual intercourse till the girls are 'big
834 enough', informants said, and the boys must not force the girls. If a girl complained to her parents and the parents took her back and sent the young husband away, he might have to wait for years again for another bride to grow up. The /Kung are
[123] prevented by their incest taboos and their modesty from speaking freely about sex and I learned nothing about the actual sexual practices of the young couples. /Nai and her young husband, /Gunda, had only one good kaross between them; they slept
513 together bundled in it, feet to feet. Bau and Tsamgao slept quite apart—at different
593 fires—when we observed them in 1952. In 1953 they slept at their own fire, apart, she

[72 cont.]

163 children, who are always approximately two or three years apart.

Among the Naron the bride is formally abducted; the word
585 for "to marry" is the same as "to catch." Actually, however,
[583] negotiations precede this abduction. Among the Naron exogamy
582 now applies only to actual siblings. After the wedding the young
591 couple moves to the village of the bride's parents and sometimes
847 stays there for years. There is also infanticide among the Naron.
855 Otherwise, however, the Bushmen are greatly attached to their children.

5. State and Law

Among the ≠Auin, the chief's position is hereditary in the
622 man's tribe. The same is true among the Nogau. Among the
[178] Naron there are no actual chiefs any more. The last one lost his authority by staying on the farms most of the time as a worker. Bleek believes that formerly such a chief ruled 30 to 50 families.
[701] In most recent times all these tribes had a war chief, at least nominally.

Among all three tribes the conception of private ownership
422 685 of utilitarian objects is very strongly developed, and theft is punishable by death. Every kin group has a certain territorial
423 district. The boundary markers are not clearly defined everywhere in this flat terrain, so that crossing them does not have the same serious consequences as it does in the north. On the other hand, a person who finds game that was killed by arrow poison but not shot by him, may not take any of it. The gathering of veldkost is permitted everywhere. A person who finds a stock of honey, on the other hand, makes a sign there, and it is henceforth his private
[222] property. Among the ≠Auin individual Bushmen burn parts of the
[425] veld, and all the veldkost that grows there is regarded as the individual's private property.

The feuds between individual kin groups are designated as
628 721 wars, but since legal revenge is practiced almost exclusively against members of other hordes, every [73] enforcement of the law at the same time means war. Among the Nogau, war is ceremoniously announced by messengers.

sticks, pipes, etc., and occasionally assist the women in fetching wood and water. The women build the huts, collect veldkos and prepare the food, make the fire and keep it going, gather wood, fetch water and manufacture ostrich eggshell beads for ornaments, etc. The latter are also responsible for keeping the camp clean. 462

Infants and young children accompany their mothers on their daily excursions in search of food until they are old enough to look after themselves. From that time onwards the mothers take practically no share in their education which, in the case of girls, is entrusted entirely to an old woman who lives in the hut with the young girls, and in the case of boys, to their fathers. 857 855 871

Little girls, while still with their mothers, are taught to love and respect the old woman and to seek her company of their own accord. After taking up residence with her they accompany her daily into the veld and thus gradually come to learn from her all the duties which will ultimately devolve upon them. Boys sleep under the tree in the centre of the camp at night or in a hut specially set apart for them. Each morning they accompany their fathers into the veld. At first they are given little bows and wooden arrows with which to amuse themselves. Towards the eighth or ninth year each is provided by his father with a proper bow and three arrows which, however, are not poisoned. With these he is allowed to shoot hares, guinea fowl and other birds, wild cats, small buck, etc. After killing his first steenbuck or duiker he is given a few poisoned arrows and later, when he has become proficient in the use of these, he is taught to stalk and shoot big game. By the time he reaches the age of puberty he has, as a rule, gained a very good knowledge of veld craft. 868 857

Initiation Ceremonies.

Both boys and girls, on reaching a marriageable age, are subjected to certain ceremonies before being admitted to full membership of the group. These ceremonies vary considerably among the various tribes. 881 [184]

The following is an account of the girls' initiation ceremony as practised among the *Hei-||om* group around the Etosha Pan. As young girls (*ǂkham-khoidi*) approach the age of puberty they are placed in a hut called *ǂkham-khoidi* or *aurai-khoidi oms* in which they sleep at night. During the daytime they gather veldkos either by themselves or in company with the married women. Men, whether married or single, may not enter the *ǂkham-khoidi oms* nor may they speak to the *ǂkham-khoidi*. The latter may, however, speak and be spoken to by the *aurogu*, but only at a distance so that no conversation of an intimate nature is possible without being overheard by the grown-up people. A man may on occasion address a *ǂkham-khois* by saying, "you must grow up so that I may marry you," but she will not reply. When addressed by a man, say, in the veld, she runs away to her

with the wind, which made us think of the empty scherms, and still farther we found one more empty dwelling, the tiny grass nest of a mouse that hung on a bush, from a thorn.

We went around and around the pan in three huge circles, occasionally calling Toma's name, and when at last we were sure that no one was there we went back to the pan and sat in the shade of some bushes to think. Lazy Kwi sat with his chin in his hands, gazing into the sunlit veld. He was sure, he said, that no one lived at Gautscha Pan, so there was no use going there. Toma and his family had not lived at Nama for a whole season and since wind and rain had erased all traces of their passing we could not tell where they had gone. Lazy Kwi thought for a long time and at last he said that he had heard from the Bantu people at Gam that Toma had been indentured by Bantu people at another cattle post called Kai Kai, near Gam, and had been set to work minding a herd of goats. Lazy Kwi had not believed that this could have happened, but now he said that it was possible and in that case Toma would have to live not far from Kai Kai, somewhere in the veld but not too far from water. And there was such a place, said Lazy Kwi, but in the east and far from Nama Pan.

It was early afternoon, so hot that even the insects of the veld were silent. We decided to leave at once in order to reach the waterhole that Lazy Kwi had mentioned before night. We put a little meat, some water, and our blankets in the jeep, and my brother and I, Lazy Kwi and Ledimo, the interpreter, got ready to go, leaving the others to make a camp.

Before we left, Lazy Kwi took leave of his family, then got his bag of tsi beans and baobab seeds from his wife and put a handful or two into another bag which he would take with him, leaving the larger share with her. When his little son saw what he was doing and realized that his father was preparing

9: Thomas T-5 (1951-1955)1959
FX10 Bushmen FX10
Kung

to go, he began to cry, saying: "Father, Father," and when Lazy Kwi hesitated a moment, then said he was going anyway, the little boy picked up a handful of stones and threw one at him. This amused Lazy Kwi's wife, who smiled and tried halfheartedly to take the stones away, but it angered Lazy Kwi, who caught his son by the arm and boxed his ears. That made the little boy so furious that he had a tantrum; he screamed and cried and arched his back to draw away from his mother, who tried to pick him up, both mother and child doing exactly what they had done when the little boy was a baby and no doubt had been doing ever since. His mother always did have a terrible time managing him, and he was still nursing although he was now five or six years old. Before his father left, his mother had managed to mollify him somewhat, and she sat on the ground, letting him sit on her leg to nurse. He drank from one breast and held the other in his hand as he glared over his mother's shoulder at his father, who was already in the jeep.

We drove all afternoon, going fast because the ground was hard and not too bumpy, and the plains of Nyae Nyae seemed even longer, even wider than the plains of Ai a ha'o, being more slanted. We saw the Aha Mountains, a series of large rock outcrops quite separate from each other, blunt-ended like drumlins, which the Bushmen call "The Knife's Back." They appeared on the horizon shortly after we left Nama, distant and blue over the yellow veld, so surprising to see in that flat country that we stopped to look at them. They seemed so misty and far, so infinitely alluring, that we longed to go there. When we drove on, they stayed as relatively fixed as the moon would, which showed how far away they were. Lazy Kwi said that once on a clear day he had seen them from the top of the Gautscha baobab.

We reached the waterhole at the end of the afternoon, a

513 882 together may sleep near the parents of one of them, but not exactly at the parents' fire.

855 857 Within the frame of protectiveness the parents are very permissive and make few, if any, demands on their children. With no houses and few utensils, there are not many household tasks to assign. Children are not sent off alone to do any of the daily work of fetching water or wood or [136] gathering veldkos. Although lions, leopards, and hyenas tend to mind their own business, they are present in the country and share the water holes with the Bushmen. Poisonous snakes are a very real danger. Furthermore, as the hunters say, it takes a lifetime to learn the country well enough not to be easily lost in the featureless grass and brush. The adults do not let their children out of their sight. In their parents' presence the children imitate adult activities in vital, active play, very engaging to watch, and [868] participate in actual work as they are able. The adults pause to show them how to hold a digging stick, or a toy bow or drill, so that play and learning merge.

524 857 [512] The !Kung have a rich variety of lively group games, with pantomime, singing, dancing, and other rhythmic movements, that children and adults together enjoy playing in the werf when the heat of the day is over. In most of their games boys and girls play separately, but they dance and sing together.

861 !Kung children are never harshly punished. One father said that if he had a boy who was quarrelsome or who disobeyed the rules—for instance, the absolute rule of the !Kung against stealing food or possessions—what he would do about it would be to keep the boy right with him until he learned 857 sense. The children on their part do not often do things that call forth 156 punishment. They usually fall in with group life and do what is expected of them without apparent uncertainty, frustration, or fear; and expressions of resistance or hostility toward their parents, the group, or each other are very much the exception.

881 [173] PUBERTY • When the fathers of the present old men were young men, the Nyae Nyae !Kung adopted the ceremony of the *Choma*, which they said was taught to them by a !Kung man who had married into another [171] language group in the south. The *Choma* resembles some Bantu initiation [562] ceremonies at certain points. The men who have had the ceremony and are therefore *Choma* owners take the boys to a place far enough from the werf to be out of hearing of the women, who, the !Kung claim, would die if they [535] heard some of the *Choma* sounds. The men and boys dance all night for several nights to special *Choma* songs with special rhythms that differ from [534] those of the other dances. A secret bull-roarer plays a part in the ceremony. [302] At the end the boys are scarified with a vertical line down the middle of [304] their foreheads and are given a special *Choma* haircut. Circumcision or other genital operations are not practiced by the !Kung.

312
484
222
[426] and may stay in constant use for years. It is curious therefore that each family possesses less than 10 shells and must borrow shells in order to make these hiking trips to the nuts. The limited number of containers is probably the reason why members of a camp go out to the nuts in shifts. When one family returns, the camp's ostrich egg shells are pooled, and then another family may go out.

312
484
482
222 A second limitation is the weight of water that can be carried. The 756 ounces of water required for four days at the nut forest weigh 47 lbs. Each empty ostrich egg shell weighs eight ounces; so that the 14 shells themselves weigh [855] an additional seven lbs. Furthermore it is necessary for the parents to carry the younger children on their shoulders. So, in effect, the parents must walk out to the nut forests fully loaded with water and children and also return fully loaded with nuts and children. On the return trip the weight of the water is replaced by an equivalent weight of collected nuts.

The third limitation is set by the volume that the ostrich egg shells occupy in the carrying space of the kaross. The volume occupied by 14 ostrich egg shells is roughly equivalent to the volume occupied by 14 quart-sized milk bottles. When the time comes for the trip home the adults must pack into each kaross 20 lbs. of nuts, as well as the empty ostrich egg

312 shells; this makes for a very bulky and unwieldy parcel. The
484
222 stomach sacs, by contrast to the egg shells, have the distinct advantage of being weightless and occupying no space on the return trip, since when they are empty they dry and shrivel up.

221 The reader can now appreciate the complex logistics of
222 Bushman subsistence activities during the late winter dry
312 season. In view of the difficulty of collecting mongongo nuts during this season, it is not surprising that the people turn to an eclectic diet of roots, bulbs, and gums that are still available in the vicinity of permanent water.

222 Several variations in tactics were observed among the
484 Dobe area Bushmen. One such variation was to leave the older
855 children behind in the care of relatives while the parents
312 made the long trips to the nut forests. By leaving behind
482 two children at the main camp, the parents could effect savings of 30% in the weight of water that had to be carried out on a four day trip.

222 Another variation observed was the two-day-one-night
484 overnight hike. Such a trip lasted only 36 hours and required
312 only three ostrich egg shells of water per adult. By using
[482] this tactic, groups of ten or more people could make a rapid lightly loaded trip to the nut forests and return the following day heavily loaded with nuts. This was a difficult operation

312
824
222 The net effect of this effort is that an individual must drink much more than the minimum daily requirement of 72 ounces of water. In fact, men who were living on Fockea roots, were observed to dig out between 15 and 20 of the roots per day. The quantity of water provided by these roots is estimated at 150-300 ounces, part of which went to provide water for the children of the camp.

222
484
312 A description of one Fockea trip, in which the author participated, will serve to illustrate some of the difficulties of living away from standing water.

[123] This trip began on 6 November and ended on 16 November, 1964. The group consisted of 12 Bushmen (plus the author); there were three men, four women, and five children. One of the young women gave birth during her stay so the returning group consisted of 13 Bushmen.

November 6 - This group (minus one of the men who came out the following day) set out from the Dobe waterhole at 10:00

[103] a.m. They spent the day walking to a nut forest named !wi/wama which was situated eleven miles west of Dobe. The original plan was to remain there for five days.

[481] The pace was leisurely to suit the three older children
[855] (ages 12, 8, 6 respectively) who went on foot and the young
[843] woman who was in the terminal month of her pregnancy. On the way we stopped at intervals to eat seven different species of

Bushmen FX10

middle-aged women who counted up to five children they had reared—the others were never mentioned. The eldest children were already married, the others quite small. 162

Childhood and Family Life

All Bushmen are very fond of their children, who receive love and care without stint.[1] Babies and young children are spoiled, and rarely corrected. The children begin to walk early, but long after a child can toddle it must still ride in its mother's kaross on food-gathering expeditions, giving her an additional burden to carry wherever she goes. When finally old enough to look after themselves, the youngsters go out with other children, trailing after the women or bigger girls. They have no special playthings; infants amuse themselves with sticks and stones and grasshoppers, playing about in the sand, while the young boys soon make themselves or are given little bows and wooden arrows, with which they shoot small birds and reptiles. 855 857 [524]

Both boys and girls go out with their elders on the daily excursions in search of food, even the babies go, riding in their mothers' karosses. The day is spent out in the open veld, and here the children receive most of their education. The girls accompany their mothers, from whom they learn to know the plants and animals, and their value as food, how to collect veldkos, and how to use the different implements and utensils. The bigger boys follow the men out hunting. Towards his eighth or ninth year each boy is provided by his father with a proper bow and arrows, which are, however, not poisoned. With these he is allowed to shoot hares, guinea fowl and other birds, wild cats, small buck, etc. After killing his first steenbok or duiker he is given a few poisoned arrows, and later, when he has become proficient in the use of these, he is taught to stalk and shoot big game. By the time he reaches the age of puberty he has, as a rule, gained a very good knowledge of veldcraft. 868

In this way the children grow up in intimate contact with Nature, and acquire all the knowledge necessary for hunting and collecting. In the evening they run about near the huts, play various games, mostly denoting scenes of animal life, take part in the dances, or sit by the fire, listening to the talk of their elders, until they feel 857

[1] D. F. Bleek, *Naron*, 18 sqq., 31–3; Passarge, op. cit., 100; Dornan, *Pygmies and Bushmen*, 333–4; Fourie, "Bushmen of S.W. Africa," 89–90.

28| also have a larger apron behind, sometimes hanging from the shoulders,
29| more often tied round the waist, and almost meeting over or under the apron in front. In the north-east a leather loin-cloth drawn through a belt in the same way as that of the men, only somewhat longer, is often seen instead. A large kaross is also worn by the married women. This hangs from the right shoulder, passing under the left arm, and is tied again at the waist; it thus forms a convenient pouch, in which are carried the baby as well as supplies for the day, such as ostrich eggshells filled with water, edible roots and fruit, grass or firewood.

[854 Babies go naked, save for a trifling ornament, till they are about a
855] year old. The boys are then given a tiny belt with a semi-circular flap of leather in front, the girls a small apron decorated with leather tassels and beads. Their mother's kaross, however, continues to be
[862] their sole protection from the cold till they are weaned, when about three or four years old. The little girls then receive a tiny kaross hanging from the shoulders, the boys a small loin-cloth similar to that of the men. They do not wear a cloak of any kind till they are in their teens and are taken out to learn hunting.

30| All women and children and the younger men also wear ornaments.
23| Chief among these are ostrich egg-shell beads, the making of which is
17| one of the oldest Bushmen industries. Such beads, whole and in fragments, and at all stages of making, are found all over South Africa, from the kitchen-middens on the south coast as far north as the Okavango, where they form a standard article of barter between the Bushmen and their Bantu neighbours. They are made by the women. The eggshell is broken into small pieces which are softened in water and pierced with a small stone or iron borer. They are then threaded on to a strip of sinew and the rough edges chipped off with a horn. Soft bark fibre is next twisted between the beads, making the chain very taut, and the edges are finally rubbed smooth with a soft stone. The beads thus made are used as single chains or worked into more complicated ornaments. Bands of them are worn on the hair, sometimes encircling the whole head, more often tied to the hair on either side, while a long narrow strip may hang down the forehead or on to the neck behind. Necklaces and bracelets of these beads are also seen, and very long chains are fastened three or four times round the waist (Plate XI).

30| Besides these beads any other ornaments obtainable are worn by the women. These include arm and leg bands made of leather and bark strips or twisted from the tail hairs of a wildebeest or gnu, as
